Project Report

Kushagra Garg

CSE BRANCH , IIIT SONEPAT

Abstract – This project is based on pinterest which enables saving and discovery of information in the form of images. It is an entertainment site that can be used for B. Categories sharing creative ideas in the form of images. The web It is the catalog of different topics on which application allows the user to login using their google pins can be found

account credentials which allows them to write comments , share posts , download pins etc. The web application is made using softwares like react js for the frontend , sanity for the backend and tailwind css for writing css.

I. Introduction

Pinme app is based on pinterest which is mainly an image sharing service where users can share their ideas using images.

It consists of pins which is an image that can be uploaded on the web where others can see the content and also save it on their accounts.

II. Components

Different components of the pinme app are:

A. Feed

It is the main body of the app where the collection of pins is found.

Fig. 2. Different categories

C. Pin-Details

The details of the pin are displayed here and also the users can post their comments on

Fig. 1. Feed of the application the pins here.

3

F. Search

Search components can be used to search pins using their titles.

Fig. 3. Pin detail contains the content about the pin

D. Create-Pin

The create-pin component is used to upload a pin on the feed.

III. Softwares Used

A. React-Js

React-Js is a free and open-source front-end javascript library used for developing user-interfaces [1].

B. Sanity

Sanity is used to develop backend for applications.

Fig. 4. Create-pin

C. Tailwind CSS

Tailwind CSS is basically a utility-first CSS framework for rapidly building custom user Information about the user and the pins is interfaces [2].

added to this component.

IV. Limitations

A. Right now only google authentication can be used to access the site.
B. The time required to fetch the data is large due to which the app is updated slowly.

V. Future Scope

A. Articles can be added in the topics to make it more informative.
B. Users can make their account so that they can login without using their google id's.
